Problem (Vectors Q2.14)

Two systems with impulse responses h_1(t) and h_2(t) are connected in cascade. Then the overall impulse response of the cascaded system is given by

1) product of h_1(t) and h_2(t)
2) sum of h_1(t) and h_2(t)
3) convolution of h_1(t) and h_2(t)
4) subtraction of h_2(t) from h_1(t)

Solution

Given Two systems with impulse responses h_1(t) and h_2(t) are connected in cascade.
We know that "when two systems are cascaded, then the resultant response is the convolution of the individual responses".
Let Input x for Cascaded System be as in the below figure.

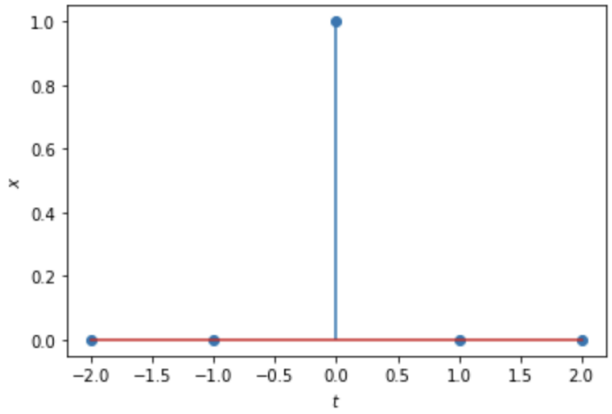

Fig. 4: Plot of x

$h_1[t]$ is given by,

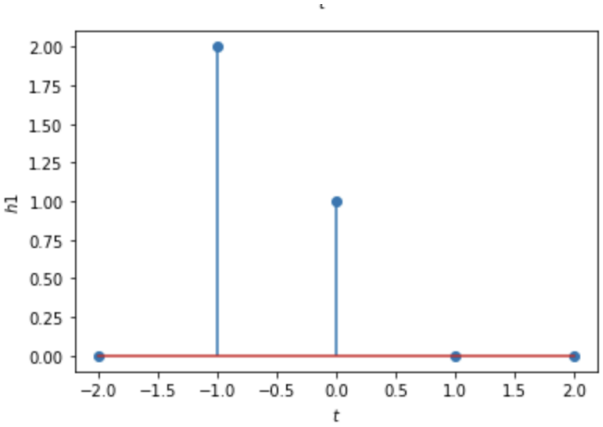

Fig. 4: Plot of $h1$

$h_2 2[t]$ is given by,

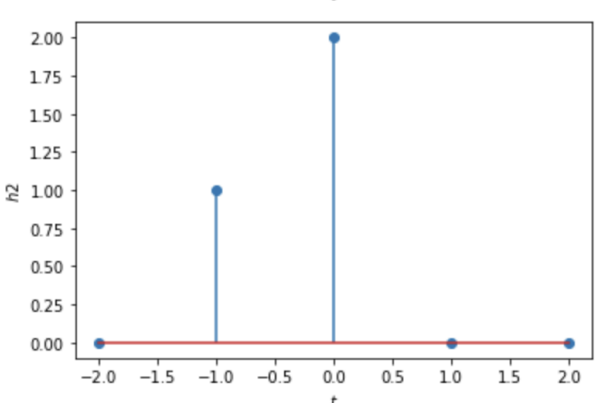

Fig. 4: Plot of $h2$

Now, for the cascaded system,

$$y_1[t] = x[t] * h_1[t] \tag{0.0.1}$$

$$y_2[t] = y_1[t] * h_2[t] \tag{0.0.2}$$

The final output $y_2[t]$ is given by,

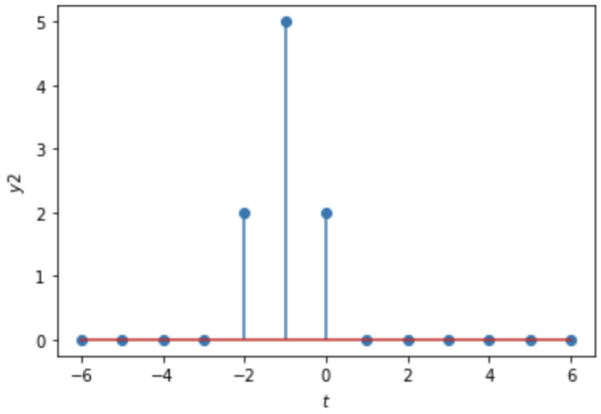

Fig. 4: Plot of $y2$

Now, by replacing the above method with Convolution of $h_1[t]$ and $h_2[t]$,

$$h[t] = h_1[t] * h_2[t] \tag{0.0.3}$$

$$y[t] = x[t] * h[t] \tag{0.0.4}$$

In this case, the final output $y[t]$ is given by,

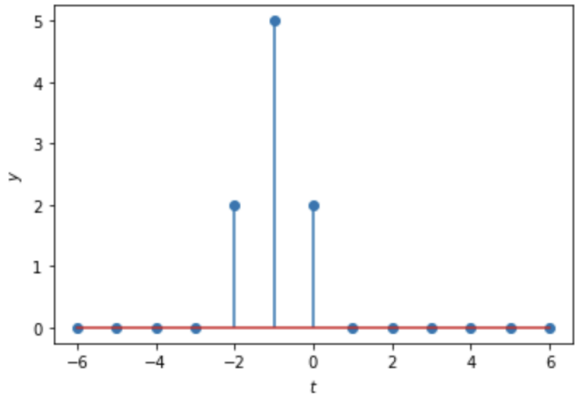

Fig. 4: Plot of y

Hence, from the figures 4, 4, the final output is the same.
Hence, the overall impulse response of the Cascaded system is given by **Convolution of h_1(t) and h_2(t)**. Therefore, **Option 3** is Correct.
